Project Name: Demo & Project 3 Requirements
Project due date: 10/18/26
Meeting number: 6
Date: 10/12/2026
GitHub link: https://github.com/540jmc17/PROJECT-3-GROUP18
System Documentation link: N/A

Previous Tasks:
Jake Crawford: I was able to help with putting together and making sure that the project was running correctly, and that everyones branch was correct, and that everything merged correctly. Since I was the scrum master I was just doing a lot of oversight for the documentation, and the implementation.
John: Finish implementations for merging, completed all testing, and wrote the architectural description with Jake.
Zema: Finalized project 2 by merging all the branches and fixing conflicts. I also tested the final implementation.
Pranav: Finished the UML diagram for the new addition, finished code review and adding prologue comments for new addition with Cam
Cameren: Finished implementations and code review for new addition
Karim: Completed the implementation of the assigned features and reviewed the code to verify functionality, identify potential issues, and ensure consistency with the existing codebase.

This Week's Task:
Zema: Add my share of the reference stories, and assign priority and story points to the initial requirement stack.
Jake Crawford: So far this week I have looked over the Project 3 requirements, and also have been brainstorming some ideas of what we could be doing for this next upcoming project, but still need to discuss with the team of what every wants to do and get a poll of what the idea is to move forward with. I will then delegate some tasks for some overview and some requirements everyone best fits for the ongoing requirements.
Karim:
John: Add my section of the reference stories and requirements that shows priority and story point number.

Notes:

Agile Reference Story spreadsheet by Sunday before 11:59 PM

Requirements Stack spreadsheet by Sunday before 11:59 PM
